

## **Cyber Security Specialist**

(Vulnerability Management & Unified Endpoint Management)

### **Job Description**

- Evaluate emerging technology and implement state-of-art security tools to ensure the protection against cyber-attack.
- Design/implement/deploy and support for Unified Endpoint Management (UEM) or Mobile Device Management (MDM) solutions.
- Perform drive encryption management services and data loss prevention solutions to prevent the data leakage.
- Implement/deploy and support for Vulnerability Management and Patch Management solutions to remediate the potential risks.
- Perform vulnerability assessment scan, provide consultation and follow-up vulnerability remediation from vulnerability assessment scan.

### **EDUCATIONS:**

- Bachelor's degree in Computer Science, Computer Engineering, Information Technology or IT related field.
- 3 - 8 years' experience in network security, endpoint security, vulnerability management, encryption management, and/or solution design/configuration of security tools.

### **EXPERIENCES:**

- CompTIA Security+ certification and/or product certification are preferred
- Knowledge and experience in network security, endpoint security, vulnerability management, encryption management and/or solution design/configuration of security tools.
- Familiarity with security tools (eg. Tenable, Qualys, VMware Workspace One)
- Good command of written and spoken English.
- Good interpersonal skills – able to communicate effectively with various levels (from end-users to executives).
- Logical & systematic approach to problem solving
- An analytical mind with excellent problem-solving ability

## Cyber Security Specialist

(Endpoint Protection & Endpoint Detection and Response)

### **Job Description**

- Evaluate emerging technology and implement state-of-art security tools to ensure the protection against cyber-attack.
- Implement/deploy and support for Endpoint Protection (EPP), Endpoint Detection and Response (EDR) solutions.
- Perform drive encryption management services and data loss prevention solutions to prevent the data leakage.

### **EDUCATIONS:**

- Bachelor's degree in Computer Science, Computer Engineering, Information Technology or IT related field.
- 3 - 8 years' experience in network security, endpoint security, vulnerability management, encryption management, and/or solution design/configuration of security tools.

### **EXPERIENCES:**

- CompTIA Security+ certification and/or product certification are preferred
- Knowledge and experience in network security, endpoint security, vulnerability management, encryption management and/or solution design/configuration of security tools.
- Familiarity with security tools (eg. CrowdStrike, Palo Alto Networks Cortex XDR, Trend Micro, McAfee and Sophos)
- Good command of written and spoken English.
- Good interpersonal skills – able to communicate effectively with various levels (from end-users to executives).
- Logical & systematic approach to problem solving
- An analytical mind with excellent problem-solving ability
